

AMR-HORIZONT / FFG Impact Innovation Package

Standalone printable deep-dive dossier

AMR-HORIZONT / FFG Impact Innovation Package

I wanted to convert AMR from a technical idea into a participatory One-Health project format with stakeholders, outputs, work packages and measurable validation logic.

- This shows that I can organize beyond code: work packages, budget logic, stakeholder strategy, evaluator Q&A, red flags and scenario tests.
- Prepared/submitted project package, not proof of funded execution unless separately confirmed.

What I had in mind

AMR-HORIZONT shows a different side of the work: not just algorithmic architecture, but project structure, stakeholders, budget logic, risks, outputs and evaluator-facing answers.

What I built

- 12-month project plan, work packages, budget logic and stakeholder map.
- Evaluator Q&A, red-flag handling, LOI/support strategy and scenario-based AP5 testing.

Mechanism detail

- AMR-HORIZONT translates a technical AMR idea into a participatory One-Health project package.
- The evidence is project-management depth: work packages, budget logic, stakeholder groups, output maps, evaluator Q&A, red flags, support strategy and scenario-based AP5 testing.
- It should be presented as prepared/submitted planning evidence unless separate funding approval is shown.

Architecture

- Problem framing and Theory of Change.
- Stakeholder interviews and needs matrix.
- Participatory decision framework.
- Toolkit, policy brief, pilot report and utilization roadmap.

Evidence cluster

- FFG project-management evidence note documents work packages, outputs, Q&A and risk mitigation.
- Use as planning/submission evidence; funding outcome is separate.

Claim-to-evidence map

The public version should be strong because it is bounded, not because it overclaims.

Claim	Evidence	Boundary
This shows that I can organize beyond code: work packages, budget logic, stakeholder strategy, evaluator Q&A, red flags and scenario tests.	FFG project-management evidence note documents work packages, outputs, Q&A and risk mitigation.; Use as planning/submission evidence; funding outcome is separate.	Prepared/submitted project package, not proof of funded execution unless separately confirmed.
The work is valuable because it shows mechanism, not surface polish.	Problem framing and Theory of Change.; Stakeholder interviews and needs matrix.	Fresh public demos or benchmarks would be the next proof layer.

Senior-level signal

This shows that I can organize beyond code: work packages, budget logic, stakeholder strategy, evaluator Q&A, red flags and scenario tests.

- Complex project organization beyond code.
- Stakeholder and governance thinking in a high-stakes domain.
- Ability to anticipate evaluator objections before the conversation.

Skeptical reviewer questions

- What is actually built here, and what is still design? Answer: the status and boundary are stated directly inside the AMR-HORIZONT / FFG Impact Innovation Package case.
- Which private evidence is intentionally not public? Answer: local paths, credentials, private channel details and confidential raw material are excluded.
- Why is this relevant? Answer: the case shows a reusable component for agents, tool use, memory, routing, validation or high-stakes governance.
- What would be the next stronger proof? Answer: synthetic demo, audit trace, benchmark or external review, depending on the case.

Lessons and boundaries

Prepared/submitted project package, not proof of funded execution unless separately confirmed.

- A strong technical idea also needs stakeholder and governance design.
- Budget, outputs, risks and evaluation need to be thought together.

Next hardening / next project step

- Use as general-portfolio proof of project maturity.
- Keep secondary in Fellowship unless the project question needs it.
- Create a public sanitized project one-pager with work packages, outputs and risk table.
- Keep private budget/personal details out of the public package unless intentionally disclosed.
